Information Security Policy

As a provider of information technology solutions and services primarily to health service operators, we, INFO WORLD, believe that we have the obligation to protect both our own information and those of our clients and partners to which we have access. We also undertake the commitment to meet all applicable legal requirements regarding information security.

In order to ensure that these commitments are implemented, we have established a set of objectives related to the confidentiality, integrity and availability of information so as to reduce information security risks.

To achieve the stated desired results, we have set up and implemented an information security management system that meets the requirements of ISO / IEC 27001, a system that we commit to continuously improve.

Daniel NISTOR, Executive Manager
