Quality Policy

As a provider of information technology solutions and services primarily to health service operators, we, INFO WORLD, will constantly offer solutions and services that meet or even exceed customer requirements, while complying with all legal and applicable regulated requirements.

To ensure this, we have established a set of quality objectives that we regularly review. These objectives relate to: understanding of all stakeholders requirements, quality of the offered solutions, the quality of technical support, staff competence and compliance with stated requirements.

To achieve the desired results, all our solutions and services are built in a quality management system that meets ISO 9001 requirements and, for medical devices, ISO 13485 requirements. We commit to maintaining the effectiveness of this system and to continually improving it in order to increase customer satisfaction.

Daniel NISTOR, Executive Manager
