

American Standards, ROMANIAN SOFTWARE

Jessica Selby – Info World

Info World has been a force of excellence and innovation in the Romanian IT&C market, specifically in eHealth. In our 15+ years as leaders in both the private and public sector, we've impacted and improved the medical fields processes from every stakeholders' perspective.

We established ourselves a market leader in Romania due to our ability to provide essential tools and solutions for the medical professional through our multiple specialized interfaces and excellent data security, regarding both our ERP and CRM software. We remain an active frontrunner in our chosen field by conducting research and taking part in conferences showcasing scientific advancements alongside our partners from top academic institutions and corporate environments.

The medical field only can benefit from innovative solutions that satisfy it's need for communication, compatibility, and security. Considering the new regulations and laws being passed on an international level, as well as national, we have secured our services by use of ethical hackers and strategic partnerships. With this in mind, Info World positioned itself as a pioneer when it comes to standardization, interoperability, and cyber security in the Romanian market.

We are the **ONLY** company in Romania to be certified by the Empowerment IHE Connectathon in interoperability, as well as Meaningful Use Stage 1 and 2 certified. We were founding members of both the National Association HL7 Romania, and of the European Software Association. These accolades prove that we prioritize fruitful collaborations with our clients, as well as our international partners.

Most recently, we joined our American partners at MedicaSoft at the Healthcare Information and Management Systems Society Annual Conference and Exhibition (HIMSS17) in Orlando, Florida. HIMSS attracts over 40,000 health IT-focused professionals from around the world. This year the conference's concentration was on interoperability and cybersecurity, two topics that have been prioritized at Info World for some time now and will continue to be a focus as we continue to grow and evolve in one of the most rapidly transforming market in today's society.

Monica Stout – MedicaSoft

MedicaSoft builds electronic health record (EHR) and personal health record (PHR) software that helps providers deliver better care and inspires patients to become more involved in their own health. As an exhibitor at the HIMSS17 conference, MedicaSoft provided demonstrations of their innovative healthcare IT products, ehr.NXT and HealthCenter, which are built using completely modern technology.

Interoperability is a common problem in healthcare IT in the US. By applying new technology in healthcare that companies like Wal-Mart, LinkedIn, and Google use, MedicaSoft offers a platform with no legacy burden that encourages both innovation and integration. ehr.NXT and HealthCenter are in the cloud, easy to deploy and update, and seamlessly integrate with legacy systems.

MedicaSoft's HIT products are certified and accredited. ehr.NXT and HealthCenter are both Office of the National Coordinator for Health Information Technology (ONC-HIT) 2014-certified. This means both products meet the Meaningful Use Stage 1 and Stage 2 requirements in the US.

Additionally, MedicaSoft is an EHNAC (Electronic Network Accreditation Commission) and DirectTrust accredited Health Information Service Provider (HISP) completing both the Direct Trusted Agent Accreditation Program (DTAAP) for HISP Services and the Cloud-Enabled Accreditation Program (CEAP). In February 2017, MedicaSoft achieved 100% interoperability with other accredited DirectTrust HISPs such as Cerner, McKesson, NextGen (Mirth), SureScripts, and athenaHealth.
